

Electric Bike and Scooter Charging Safety

Lithium-ion batteries are a serious fire risk. These fires are self-sustaining and can't be put out with water or a fire extinguisher. Prevent overcharging to reduce the risk.

Charge devices during waking hours, not while sleeping and don't leave devices plugged in after they've been fully charged.

Avoid charging devices in rooms with soft furnishings, like lounges or bedrooms. Use a well-ventilated area such as a shed or garage, away from exits.

Choose reputable brands that display the Australian Regulatory Compliance Mark (RCM tick).

Stick to the charger supplied with your device. A matching plug doesn't guarantee it's safe or compatible.

Charge devices on hard surfaces like tile or concrete and keep flammable items well clear of charging area.
